Anything in Your Operation*

AGILYSYS STRATTON WARREN SYSTEM (SWS)

TECHNOLOGY | INNOVATION | SOLUTIONS

Inventory & Procurement

Agilysys Stratton Warren System (SWS) is designed to improve productivity while reducing labor costs and waste. The system manages the entire inventory and procurement process — from requisition to invoice — and integrates with most leading financial and point-of-sale software products. Maximize your organization's buying power by aggregating the purchasing of all departments and locations for mission-critical items, as well as for those hundreds of incidentals that add up to big dollars. SWS is available as an on-premise solution or through a subscription service.

Streamline the Inventory and Procurement Process

For many companies, profits are eroded during the purchasing, receiving and inventory management processes. Agilysys SWS software automates all aspects of inventory and procurement. For example, the system can automatically detect when an inventory item is running low, generate a

purchase order as part of a preexisting contract or issue a request to vendors to bid — all with minimal human intervention. For highly variable food and beverage items, the Agilysys SWS application can monitor variations in costs and determine which items are high cost/low sales versus those that fall into the more desirable low cost/high sales category.

Save Time and Increase Accuracy

Your purchasing professionals know your company and your industry. Agilysys SWS software enables them — and everyone else in your organization — to leverage that knowledge and experience. Tasks that once took hours or days can be done with a few clicks of a mouse. The solution will assist in eliminating time consuming, error-prone paper documents, allowing purchasing professionals to concentrate on the elements of their role in your strategic sourcing process.

Flexible

SWS offers modules that can be acquired and implemented at your pace, enabling you to define the system you need for your business without the cost of extra features you don't need. Optional modules include:

Barcoding

Provides either wireless or wired data collection of physical inventory, allowing users to scan items into the system using the item SKU or UPC label for quick and accurate data collection. The application can be used for receiving, inventory issues or transfers and physical inventory. The module streamlines efficiency in the hospitality industry by standardizing data collection and providing detailed real-time inventory counts.

Menu/Recipe Analysis

Cross-references recipe items and ingredients, 'flags' recipes for excessive cost, generates detailed shopping lists and provides a nutritional analysis of menu items. The module also enables food and beverage buyers to perform both actual and theoretical cost and sales analysis calculations via a seamless interface with the venue's point-of-sale (POS) solution. A useful cookbook feature includes systematic plating instructions, recipe information and photos, ensuring consistency from day to day throughout your organization.

Retail

Automates the entire retail process with full open-to-buy, enabling users to calculate and maintain sales prices, markdowns and updates as well as track slow moving items and minimize pricing errors. The module integrates seamlessly with most point-of-sale (POS) and back-end financial systems as well as both wireless and wired barcoding devices. Generate a variety of reports, including inventory, on-order, open orders, retail budget worksheets, retail vendor tracking and sales history to provide an accurate and real-time picture of inventory.

SWSDirect

SWSDirect provides a convenient, efficient and intuitive shopping cart experience. Enhanced bidding and request for pricing functionality enables buyers to obtain additional bids via the Web, which reduces costs through competitive purchasing. Other features include supplier registration tools and self-service maintenance capabilities. This functionality allows suppliers to register and update company information quickly and easily while providing properties with advanced reporting tools that increase the visibility of documents that may have expired, such as vendor licenses and certificates. Message boards enable purchasing staff and suppliers to communicate more effectively.

Subscription Service Deployment

Agilysys offers SWS in a Software as a Service (SaaS) delivery model, providing essential functionality to your outlets from centralized servers at the Agilysys data center via secure Internet connections. Some of the benefits of the subscription service program include:

- Server and software performance monitoring and health
- Full system backups
- System recovery
- Latest software and patch updates
- Executable configuration and maintenance
- Online technical support and online knowledge base
- 24x7 telephone technical support
- Access to customer account representatives and installation services

The subscription service is tailored to organizations that want industry-leading technology but may not have the resources immediately available to invest in the additional staff or infrastructure associated with supporting it. Reduce capital expenditures and focus on core business competencies by allowing Agilysys to attend to systems management.

Wireless Handheld Devices for Ordering, Inventory and Receiving	Streamline the ordering, inventory and receiving process.
Multiple Interfaces	Integrate with leading suppliers, financial software or point-of-sale (POS) applications.
Scalable; Handles High-Volume Activities at Multiple Properties and/or Outlets	Deploy a system that will adapt to your ever-changing needs.
Automated Strategic Sourcing	Expedite processes; improve productivity while helping to reduce labor costs and waste.
Single Platform, Enterprise-Wide Paperless System	Optimize existing resources while reducing unnecessary costs.
Full-Function Accounting Backbone	Obtain accurate operating costs and simplify accounting operations.
Stable, Powerful Platform Runs 24/7	Utilize a reliable system that you can depend on, any time of the day or night.

Agilysys.
