

Agilysys Delivers Sustainable Technology for Higher Education

Helping the Environment, Helping the Bottom Line

Many colleges and universities are initiating sustainability initiatives on campus, stressing the importance of conserving natural resources and minimizing the impact of human activity on the environment. When choosing technology to support these objectives, it's important to utilize vendors that have traditionally served the higher education industry by delivering broad functionality and diverse expertise.

Agilysys provides a suite of solutions that help to optimize a variety of processes on campus. In addition, these technologies support environmental regulations and help to deliver a positive impact on the bottom line.

Point-of-sale (POS) Solutions

Agilysys delivers a powerful POS solution and partners with Toshiba Global Commerce Solutions to provide hardware that is manufactured incorporating recycled plastics and using environmentally preferred materials and finishes. Toshiba has made a commitment to its customers to deliver products that meet the following design and manufacturing requirements:

- **Upgradeable.** Designed with common building blocks to promote parts reuse and to extend product life and perform over a long (seven-year) life cycle, translating into fewer obsolete products and less disposal.
- **Reuse. Recycle.** Easy repair and upgradeability of products facilitates reuse. At the end of life, parts can be recycled in a cost-effective and responsible manner.
- **Built with recycled materials.** Where they are economically and technically justifiable, Toshiba products are manufactured with some amount of recycled plastic.
- **Save energy.** Toshiba is building products with improved energy efficiency and/or reduced consumption of energy.
- **Minimize environmental impact.** Through careful selection of environmentally preferred materials and finishes, Toshiba reduces the use of limited and/or harmful resources.
- **Dispose safely.** At the end of product life, Toshiba products with dissimilar materials are separated. Hazardous materials (i.e. batteries) and plastics are labeled properly to ensure correct recycling/disposal methods are used.

- **RoHS' (Restriction of Hazardous Substances) compliant.** All RSS products meet RoHS compliance regulations in Europe, California and China.

Leveraging remote management capabilities, which are built into every Toshiba retail system, helps to reduce energy consumption and lower costs. In addition, when a product reaches its end of life, Toshiba offers asset recovery solutions to assist with end-of-life management, including hazard-free disposal that carefully separates and recycles product components.

Agilysys supports companies that have integrated the principles of sustainable development practices in their corporate strategies. Utilizing Toshiba technologies, which continue to improve on conserving natural resources and increasing energy efficiency, Agilysys solutions can subsequently have a positive impact on your bottom line.

Inventory and Procurement

Operating in a sustainable manner is imperative for our future and is a well-recognized blueprint at colleges and universities nationwide, particularly in dining services where the selection, preparation, delivery and disposal of food and beverages affects the environment in multiple ways. Foodservice outlets face a challenge when attempting to satisfy their customers and generate financial return with minimal environmental degradation.

Designed to assist foodservice controllers in choosing food items that create cost-efficient meals and meet the USDA nutrition standards, Agilysys Eatec® inventory and procurement solution helps foodservice operators develop their own innovative approaches to menu planning. Some of the core features of the Agilysys Eatec solution include:

- Inventory Database and Management
- Purchasing
- Receiving
- Requisitions and Transfers
- Recipe Analysis
- Production Management
- Sales Tracking, Analysis and Forecasting
- Reports

In addition to these core features, the following optional modules are also available:

- Catering Management
- Buffet Management/Cycle Planning
- Commissary Management/Manufacturing
- Nutrition
- Retail Merchandise

Once the Agilysys Eatec system has been implemented in a university environment, customers have reported:

- Lower Food Costs
- Increased Productivity
- Less Waste
- Fewer Human Errors

By standardizing and streamlining processes such as ordering, inventory management, recordkeeping and more, Agilysys Eatec software assists in ensuring compliance and streamlining operations for a healthier bottom line. Its dynamic functionality, along with the latest developments in technology, reduces the cost of ownership and supports campus sustainability initiatives by lessening the impact of technology on the environment.

The Agilysys Eatec solution is available through traditional licensing or through a subscription service.

Document Management

Across the campus environment, Agilysys DataMagine™ document management solution can provide tailored solutions to assist with sustainability efforts. Transform paper records into electronic images that are then archived for on-demand access. Increase security and functionality while realizing organizational process improvements.

With DataMagine software, users can:

- Scan paper records such as financials, student transcripts, purchase orders or point-of-sale receipts
- Index documents for archiving
- Retrieve, email or print documents quickly and easily
- Exchange documents both internally between multiple departments and externally with vendors and suppliers.

DataMagine's U.S.-patented imaging module seamlessly integrates with your business applications, usually without writing or changing a single line of code. A cost-effective document management solution is something that every campus needs, whether it's to cope with increasing paperwork or to satisfy regulatory requirements. Revolutionize paper document storage and retrieval from an inefficient and expensive drain on your bottom line into a benefit that saves money while promoting environmental stewardship.

Agilysys understands that sustainability is a critical component in modern college and university life and is deeply committed to running its business in an environmentally responsible manner. Agilysys solutions enable a fast implementation that can demonstrate rapid results that support the long-term success of their customer's sustainability management program.

About Agilysys

Agilysys is a leading developer and marketer of proprietary enterprise software, services and solutions to the hospitality industry. The company specializes in market-leading point-of-sale, property management, inventory & procurement and mobile & wireless solutions that are designed to streamline operations, improve efficiency and enhance the guest experience. Agilysys serves casinos, resorts, hotels, foodservice venues, stadiums and cruise lines. Agilysys operates extensively throughout North America, Europe and Asia, with corporate services located in Alpharetta, GA, EMEA headquarters in Cheshire, UK, and APAC offices in Singapore and Hong Kong.
